

**Engineering Mathematics I**  
**EG 1103 SH**

**Year: I**  
**Semester: I**

**Total: 6 hours /week**  
**Lecture: 4 hour/week**  
**Tutorial: 2 hours/week**  
**Practical: hours/week**  
**Lab: hours/week**

**Course Description:**

This course consists of five units namely: Set and Function, Trigonometry, Calculus, Algebra, Coordinate Geometry; which are basically necessary to develop mathematical knowledge and helpful for understanding as well as practicing their skills in the related engineering fields.

**Course Objectives:**

On completion of this course, students will be able to understand the concept of the following topics and apply them in the related fields of different engineering areas:

- Ideas of real number system and functional relation between parameters
- Trigonometric equations, inverse circular functions and properties of triangles
- Progressions, permutations and combinations, binomial theorem, exponential and logarithmic series
- Straight lines, pair of lines and circle, Limit and continuity, derivatives and anti-derivatives

**Course Contents:**

**Unit 1: Set, Functions and Graphs** **[7 Hrs.]**

- Cardinality of set, Power set, Properties of set algebra, De Morgan's laws,
- Real number systems, intervals and absolute value
- Relations and Functions, idea of domain and range
- Types of functions, exponential and logarithmic functions with their graphs

**Unit 2: Trigonometry** **[11 Hrs.]**

**2.1. Revision: Basic trigonometric formulae, Identities and conditional identities, Height and distance**

**2.2. Trigonometric Equations and Inverse Circular Functions**

- General solutions of the equations of type  $\sin x = k$ ,  $\cos x = k$  and  $\tan x = k$
- Formulae involving inverse circular functions
- Simple identities and equations involving circular functions

**2.3. Properties of Triangles**

- The Sine, Cosine and projection laws (with proofs)
- The half angle formulae, Tangent laws and area of a triangle (without proofs)
- Simple cases on solution of triangles

**Unit 3: Calculus** **[18 Hrs.]**

**3.1. Limit and Continuity**

- Limit of functions, Indeterminate forms (only  $\frac{0}{0}$ ,  $\frac{\infty}{\infty}$  and  $\infty - \infty$ )
- Algebraic properties of limits (without proof)

- Theorems on limits (without proof)
  - Continuity and discontinuity of function, types of discontinuity
- 3.2. Derivatives**
- Definition, geometrical and physical meanings of derivative
  - Derivatives from definition of simple functions like:  
 $x^n, (ax+b)^n, \sin(ax+b), e^{ax}, a^x$  and  $\log x$
  - Rules of derivatives (sum, difference, product, quotient and chain rules)
  - Derivatives of trigonometric, parametric and implicit functions
  - Higher order derivatives
- 3.3. Integration**
- Definition and notation, Basic rules of integration
  - Fundamental integrals and Integration by substitution
  - Integration by parts and Definite integrals

## **Unit 4: Algebra**

**[12 Hrs.]**

### **4.1. Progressions**

- Arithmetic, Geometric and Harmonic Progressions
- Sum of infinite geometric series, Sum of First natural numbers
- Sum of squares and cubes of First n natural numbers (without proof)

### **4.2. Permutations and Combinations**

- Principle of counting, Types of Permutation
- Combination and its properties (without proof)

### **4.3. The Binomial Theorem**

- Binomial theorem (without proof)
- Expansion of binomial expressions, general terms, middle terms  
and terms free from variables
- Expansion of binominal expression for any index
- Expansion of exponential and logarithmic functions (without proof)

## **Unit 5: Coordinate Geometry**

**[12 Hrs.]**

### **5.1. Straight Lines**

- Three standard forms of a line, general form:  $ax + by + c = 0$ , the line  
through the intersection of two lines, the concurrency of lines, area of triangle
- Angle between two lines, bisector of angle between two lines
- and length of perpendicular from a point on a line

### **5.2. Pair of Lines**

- Homogeneous equation of second degree
- General equation of second degree representing two lines
- Angle between a pair of lines and bisectors of the angles for a line pair (without proof)
- Condition for general equation of second degree to represent a line pair (without proof)
- Lines joining the origin to the points of intersection of a curve and a line

### **5.3. The Circle**

- Standard and central forms
- General and Diameter forms (without proof)
- Tangent and normal to the circle
- Condition of tangency of a straight line to a circle (without proof)

<b>Tutorial</b>	<b>[30 Hrs.]</b>
1. Set, function and graphs	[2 Hrs.]
2. Trigonometry	[5 Hrs.]
• Trigonometric Equations and Inverse Circular Functions	[2 Hrs.]
• Properties of Triangles	[3 Hrs.]
3. Calculus	[10 Hrs.]
• Limit and Continuity	[2 Hrs.]
• Derivatives	[4 Hrs.]
• Integration	[4 Hrs.]
4. Algebra	[7 Hrs.]
• Progressions	[2 Hrs.]
• Permutations and Combinations	[2 Hrs.]
• The Binomial Theorem	[3 Hrs.]
5. Coordinate Geometry [6 Hrs.]	
• Straight Lines	[2 Hrs.]
• Pair of Lines	[2 Hrs.]
• The Circle	[2 Hrs.]

#### Evaluation Scheme

##### Unit wise Marks division for Final

S. N.	Units	Short questions (2 marks)	Long questions (4 marks)	Total Marks
1	Set, function and graphs	2x2=4	1x4=4	8
2	Trigonometry	3x2=6	2x4=8	14
3	Calculus	4 x 2 = 8	4 x 4 = 16	24
4	Algebra	3 x 2 = 6	3 x 4 = 12	18
5	Coordinate Geometry	2 x 2 = 4	3 x 4 = 12	16
		<b>14 x 2 = 28</b>	<b>13 x 4 = 52</b>	<b>80</b>
